

CittaEFS User Guide

Workflow and Configuration Manual

CittaEFS User & Administration Guide © 2026

1. Logging In & System Status

Logging In

Access Restriction: Access is restricted to authorized company users only.

- **How to sign in:** Go to the login page, enter your registered Email Address and Password, and click *Sign In*.
- **Forgot your password?** Click *Forgot Password?* on the login screen, type in your email, and check your inbox for a secure reset link. Your new password must be at least 8 characters long. You can also update your password later by going to [Settings > Security](#).

Checking System Status (The Top Bar)

Look at the top bar of your screen to instantly see how the system is running:

Indicator Category	Status Displayed	What It Actually Means
System Health	LIVE	Everything is connected perfectly to the NRS portal.
System Health	NRS ERROR	The NRS portal servers are facing a temporary delay. Don't worry — your invoices will wait in line and automatically try sending again later.
Operation Mode	AUTO	Invoices are sent to the NRS portal the moment you create them.
Operation Mode	MANUAL	Invoices are saved as drafts first. You have to manually click "Process" to send them out.

2. Creating Invoices

Method A: Creating an Invoice Manually

Where to go: [Menu > Invoices > Manual Input](#)

- **Step 1: General Info:** Type in your Invoice Number and choose the Issue Date.
- **Step 2: Customer Selection:**
 - *For Businesses (B2B):* Pick a saved customer profile. Their Tax Identification Number (TIN) and address will fill in automatically.
 - *For Individuals (B2C):* Flip the switch to B2C and type in the customer's name.

- **Step 3: Extra Fees & Discounts (Optional):** Add extra costs (like shipping or handling) or apply a percentage discount to the entire invoice before taxes are calculated.
- **Step 4: Add Your Items:** Fill in the rows for the products or services you sold:

Form Field	Description & Guidance
Item & Description	What you are selling (name and specific details).
Price & Quantity	How much one costs and how many were bought.
Tax Category	Choose the relevant VAT rate; the system handles the math for you.
HS/Service Code	Choose a required compliance code from the dropdown menu (use HS Codes for physical goods and Service Codes for professional work or labor). This is mandated by the NRS portal.
Line Discount	A discount applied only to this specific row item.
State Tax	Check this box if a regional or local internal consumption tax applies.

- **Step 5: Save or Send:**
 - If in *MANUAL* mode: Click **Validate Invoice** to save it safely as a draft.
 - If in *AUTO* mode: Click **Push to NRS** to send it live immediately to the NRS portal.

Method B: Uploading Invoices in Bulk (Excel)

Where to go: [Menu > Invoices > Excel Upload](#)

1. Click **Download Template**. Keep the columns exactly as they are — do not rename or delete them.
2. Fill in your sales details.
3. Save the file as a regular Excel workbook (make sure it's under 10MB).
4. Click **Select File**, choose your file, and hit **Upload**.

The system will instantly check your file and point out any specific mistakes inline if information is missing.

Pro-Tip (Grouping items together)

If one invoice has multiple different items, just write the exact same Invoice Number on consecutive rows in your Excel sheet. The system will automatically combine them into a single, clean document.

3. Managing the Queue: Pending Invoices

Where to go: [Menu > Invoices > Pending Invoices \(Updates every 10 seconds\)](#)

Depending on what the system is doing, you will see these status tags:

- **PROCESSING:** The system is actively sending the document to the NRS portal. No action is needed from you.
- **DRAFT:** (Only happens in Manual Mode). The invoice is waiting. Click **Process** next to the invoice to send it, or use the check-boxes to select multiple rows at once and click **Process (X)** to send them to the NRS portal in a single batch.

4. Records, Logs & Compliance

Saved Invoices

Once an invoice is approved and signed, it goes into a permanent archive. From here, you can:

- Find the **IRN** (the official, unique tax ID number given back by the NRS portal).
- Click **PDF Download** to preview, print, or save a beautifully formatted copy complete with your company branding.
- Click **QR Code** to download the official tax verification square as a clean PNG picture.

Updating Payment Status

Where to go: [Menu > Invoices > Payment Update](#)

Select your target invoice using the checkboxes, click **Update**, and mark it as **PAID** or **REJECTED**. You can also enter the bank reference code or transaction ID to keep your records straight.

Activity Audit Log

Where to go: [Menu > Activity Log](#)

This keeps a history of who changed what. You can sort the list by date range, what action was taken, or which user did it. Click on any row to expand and see more details.

5. Fixing Errors

If an invoice fails, it moves into one of three specific error buckets so you can fix it easily:

Error Bucket	Where to Find It	What Caused It	How to Fix It
Validation Error	Invoices > Validation Errors	Something was written wrong or a mandatory field was left blank (like a missing service code).	Download the data, fix the mistake on your side, delete the bad entry, and resubmit.
Sign Error	Invoices > Sign Errors	A security or digital signature handshake mismatch happened during verification.	Download the record, clear the error from your screen, and try a fresh submission.
Transmit Error	Invoices > Transmit Errors	The internet dropped, a timeout happened, or the NRS portal website is down for maintenance.	Simply click Retry to try sending it to the NRS portal again.

6. Settings & System Management

Customer Profiles

Where to go: [Menu > Customers](#)

- **Add a single customer:** Click the *Add Customer* button, type in their name, TIN, address, and email. If you leave the Customer Code blank, the system will generate one for you automatically.
- **Add customers in bulk:** Download the special customer template, fill it out, and upload it via Excel.
- **Deactivating:** If you don't work with a customer anymore, you can deactivate them. They will disappear from your invoice dropdown menus, but their past invoice history remains completely safe.

Managing Staff & Roles

- **Custom Roles** [Menu > Roles](#) Click + **Add Role**, name it, and check the boxes for what they are allowed to do (e.g., Manage Invoices, View Invoices, Edit Company Settings, Manage Customers, See Reports, or Manage Integration).
- **Inviting Staff** [Menu > Users](#) Click + **Add User**, enter their name and work email, and assign them a role. They will get an email with instructions to set up their account.

Detailed Company Settings (4-Tab Layout)

Where to go: [Menu](#) > [Settings](#)

1. **Profile Tab:** Edit your business name, tax details, physical address, and upload your security certificates required for NRS portal compliant QR codes. You can also upload your company logo for PDFs, customize automated email messages, and toggle your default processing mode (Manual vs Auto).
2. **Invoice Tab:** Choose your visual invoice template layout dropdown, add custom terms or banking instructions to the invoice body, and set a standard footer message.
3. **Custom Fields Tab:** Want to collect extra information on your forms? Click **Add Field**. Give it a background system name (use lowercase and underscores, like `customer_notes`), a display label that users see, and choose the format (like text, date, checkbox, or dropdown).
4. **Security Tab:** Change your own account password safely here.

7. Code Dictionary

Where to go: [Menu](#) > [Code Dictionary](#)

The Code Dictionary serves as your central repository for looking up and verifying compliance codes required by the NRS portal.

- **Selecting a Category:** Use the left sidebar (on desktop) or the **Select Category** mobile drawer to switch between reference data types:
 - **Tax Categories:** Displays available tax classifications and their respective percentages (e.g., Standard VAT).
 - **HS Codes:** Required compliance codes for physical goods.
 - **Service Codes:** Required compliance codes for professional work and labor.
 - **Countries & Currencies:** Standard international reference codes (e.g., Alpha-2 country codes).
 - **Invoice Types:** Approved classification codes for different invoice formats.
- **Searching and Filtering:** Use the top search bar to instantly filter down long lists. The system searches across both the **Code** and **Description/Name** fields simultaneously.
- **Quick Copy Functionality:** To avoid data entry mistakes when filling out invoice forms or Excel templates, click the **Copy** icon next to any entry (or tap the row on mobile). The system will copy the raw code directly to your clipboard and show a confirmation toast message.
- **Refreshing Live Data:** If new codes are updated on the portal, click the **Refresh** icon in the top header to pull down the latest synchronous reference lists.

8. API Integration Menu

Where to go: [Menu](#) > [Developers](#) > [Integration](#)

This section allows authorized technical personnel or corporate IT administrators to connect third-party ERPs, custom software, or internal platforms directly to the CittaEFS E-Invoicing ecosystem.

The interface uses a multi-tab system to manage credentials, tracking, and codebase configurations:

Tab 1: API Key Management

- **Generating a Key:** Click **Generate API Key** to provision a brand-new cryptographic token for your application.
- **Revocation:** If a key becomes compromised or needs rotation, click **Revoke Key**. This immediately breaks all active endpoints linked to that key, allowing you to safely generate a fresh credential.

Security Notice

Keep your API key completely secure. Never share it publicly, expose it in front-end client-side code, or commit it to shared version control repositories. All external HTTP requests must include this key in the header format: `Authorization: Bearer {YOUR_API_KEY}`.

Tab 2: Webhook Configuration

Webhooks send instant HTTP POST payload notifications directly to your servers whenever critical document lifecycle milestones happen.

- **Setup:** Enter your target listener URL (must begin with `http://` or `https://`) into the endpoint box and hit **Save Webhook**.
- **Supported Core Events:**
 - `invoice.signed` – Document signature verification completed.
 - `invoice.transmitted` – Sent out directly to the live NRS portal.
 - `invoice.approved` – Accepted permanently by official regulatory servers.
 - `invoice.failed` – Document structural validation, transmission, or signing failure.
 - `invoice.payment_updated` – Status flag changed to PAID or REJECTED.

Tab 3: Live Endpoints & Validation Fields

The system exposes direct integration pathways for external programmatic actions:

- `/api/integration/gen/invoices` (POST): Submit raw invoice item objects for immediate validation, processing, and compliance wrap.
- **Mandatory Request Constraints:**
 - Dates must be supplied cleanly in standard `YYYY-MM-DD` compliance formats.
 - *B2B Invoices*: Require a pre-existing, valid `customerCode` profile.
 - *B2C Invoices*: Must specify `invoiceKind = "B2C"` alongside an explicit `customerName` text string.
 - Every line item must state a verified regulatory `hs0rServiceCode` from the official compliance dropdown matrices.

Tab 4: Technical Export & Code Playbooks

- **Interactive Language Selector:** View clean, plug-and-play code snippets for common requests across popular languages including **Python, C#, Node.js, Java, PHP, and cURL**.
- **PDF Documentation Export:** Click **Export to PDF** from the control layout to download a standalone, customized **CittaEFS API Reference Guide** loaded with structural schemas, best practices, and code examples tailored entirely to your chosen development language.

9. Dashboards & Reports

- **The Dashboard** [Menu > Dashboard](#) Your home screen displays a quick visual chart of your invoicing trends, alongside vital stats like your total sales volume, successfully sent files, errors, and running tax totals.
- **Report Generator** [Menu > Report](#) Choose the type of summary you want (e.g., Tax Reports, Executive Summaries, Revenue Analysis). Choose your timeframe (Today, This Month, or a Custom Range) and save it as a clean PDF or an Excel sheet.
